WORKSHOP

CRAFTING ADOBE TILES

14.3.–22.3.2026 / EU-funded
Erasmus+ Project "Crafting Clay"

As part of the three-year Erasmus+ programme 'Crafting Clay – Exploring circularity with local earth', we are taking an in-depth look at clay as a building material and researching various clay techniques in different countries. The first workshop took place in Liechtenstein 2025, where we tried out the red pavilion with clay as filling material within the half-timbered construction. The second workshop will take place in the Netherlands and will focus on the production of pressed adobe clay bricks (roof tiles).

The workshop will take place in Amsterdam and Empe (NL) and will be coordinated by the Academie van Bouwkunst in Amsterdam. Students from the Academie van Bouwkunst, NTNU Trondheim and KU Leuven will participate in this Design Build Workshop. Eight students from the University of Liechtenstein can participate in the workshop and will receive financial support from the EU.
